DUBAI

PERSONAL DETAILS

DDr. Karl-Georg Heinrich is a specialist in outpatient cosmetic surgery as well as anti aging medicine. For many years he has been a member of the American Academy of Cosmetic Surgery (AACS) an the Société Française de Lipoplastie (SFL) as well as the International Hormone Society (IHS), the American Academy of Anti-Aging Medicine (AAAM), and many other leading international medical associations.

DDr. Heinrich is constantly working to further improve standard cosmetic surgery, which still relies mainly on scalpel and silicon. In **New Cosmetic Surgery** body own stem cells and bio-identical hormones are being used besides gentle, minimally invasive surgery for the goal of bringing natural beauty and fitness to full evolvement.

Together with his team DDr. Heinrich is working on the development and refinement of novel treatments in aesthetic and regenerative medicine.

PRELIMINARY REMARK

At Clinic DDr. Heinrich all cosmetic operations are available under tumescent anaesthesia (infiltration of anaesthetic fluid). The option to perform cosmetic surgery under – compared to general anaesthesia – very gentle local anaesthesia means additional safety for the patient and reduced aftercare.

THE CHOICE OF THE PHYSICIAN

There is no such thing as a “Specialist in Cosmetic Surgery” (Facharzt für Kosmetische Chirurgie). Medical training has always been aimed at the therapy of diseases and disabilities. The emphasis has always been put on the conveyance of medical knowledge and skills needed for treating ill patients. However, physicians interested in cosmetic surgery always had to get their highly specialised training in courses and institutions which are not part of standard medical education.

When choosing a physician you should always inquire what kind of training he or she has undergone and how many times he or she has performed that particular operation which you are interested in. Let him show you the proof (diplomas, etc.)! Before and after photos will give an impression of the aesthetic capabilities of the surgeon. Membership in accepted cosmetic-surgical societies (like AACS) is also of importance. The speciality to which the physician belongs is meaningless.

LIPOSUCTION WITHOUT MACHINERY (LIPOSCULPTURE)

Liposuction offers a solution in case of persistent padding, which does not react to changes in diet and exercise.

In most cases mechanical pumps are used for liposuction. These machines cause additional stress to the tissue, thereby prolonging the healing process. An artist in his specialty, DDr. Heinrich takes particular care to employ only most gentle procedures. Therefore he will shape the body silhouette exclusively by handwork, using syringes and no machinery.

This special method of liposuction is called Liposculpture. The reduced stress on the patient brings even an additional advantage: Compared to standard liposuction it will allow for suction of greater amounts of fat per session.

Before

After

DDr. Heinrich offers Liposculpture with microcannulas or standard cannulas.

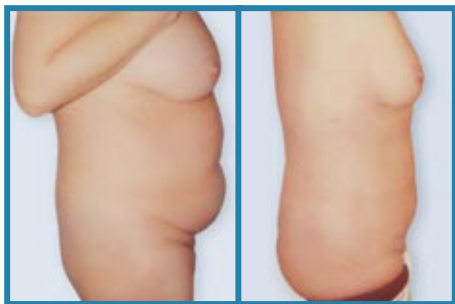

LIPOSCULPTURE BY USE OF MICROCANNULAS (ACCORDING TO DDr. HEINRICH)

Liposculpture with microcannulas is the most gentle and precise technique in liposuction. Only these very thin cannulas allow for the shaping of the immaculate silhouettes which DDr. Heinrich is famous for all over Europe. The microcannula method is accepted as state of the art by the American Academy of Cosmetic Surgery.

For the perfection of this method, DDr. Heinrich has developed his own patented microcannulas. Liposculpture with microcannulas is more elaborate and therefore more costly than the standard method.

This investment in your body will pay. Liposuction with microcannulas provides

- *minimal burden on the body*
- *precise results*
- *minimal aftercare of only a few days*

Before

After

LIPOSCULPTURE WITH STANDARD CANNULAS

Liposculpture with standard cannulas offers a cheaper alternative to Liposculpture with microcannulas.

The difference lies in the size of the cannulas which are thicker and more “aggressive”. That allows for faster surgery. However, DDr. Heinrich refuses to use machinery even in Liposculpture with standard cannulas and always relies on his handwork.

The thinner the cannulas, the more precisely can the silhouette be shaped.

FAT-AWAY INJECTION

Fat-Away Injection (Injection Lipolysis) is suitable for removal of minor padding on the body and in the face. By injection of a natural fat-solving agent (Lecithine) localized padding will slowly vanish. Also “lacrimial sacks“, “double chin“, or cellulite may successfully be treated by Fat-Away Injection.

DDr. Heinrich was the first European to prove the efficacy of Fat-Away Injection in a scientific study. Here the method of injection is crucial for beautiful results without dents. Apart from an elaborate technique, a high amount of artistry is needed. On average, two treatments in an interval of 14 days are required to obtain the desired results.

REJUVENATION OF FACE AND BODY

With age the elasticity and tightness of the skin in the face, the cheeks, and the neck will decline. Certain habits in everyday life, notably stress and multiple burdens, will accelerate this process.

By a *Micofacelift with microcannulas* these visible “signs of the time” can be abolished. No skin incision is needed, no scars will remain. Botox, peelings or *wrinkle treatment with body-own stem cells and own fat* offer other solutions to the problem.

Regeneration from inside is what *Hormonal Regeneration® by DDr. Heinrich* is aimed at. With the years the function of hormonal glands declines. The resulting hormonal imbalance will cause a decline in fitness and premature ageing. By re-establishing a balanced hormone status, a general effect of rejuvenation by up to 15 years can be achieved.

Breast augmentation without silicon is available at Clinic DDr. Heinrich as a result of DDr. Heinrich’s investigations into cutting edge technology. Own fat, enriched with body-own stem cells, is being injected into the breasts in an outpatient surgery. In contrast to standard breast augmentation by use of own fat, this new method offers lasting results. Stem-cell-enriched own fat can also be used for shaping and rejuvenation of hands, face and décolleté.
